

SWP391- Project AI Usage Report		
Subject Code		
Subject Name		
Class Code		
Semester		
Lecturer Name		
Group Code		
Project Title		

List of Student		
No	StudentCode	StudentName
1		
2		
3		
4		
5		

[illegible]

AI Tool Used	
Role In Group	AI Tool Used

No.	SDLC Phase	Task / Activity	AI Tool Used	AI Output
1	<<sample data>> Requirement	User Story Development	ChatGPT	10 user stories
2	Design	ERD Conceptual	Copilot	Suggested DB tables

Student's Validation / Modification	Evidence / Link	Quantitative Measure	Value Added (1-5)
<i>Selected 5, rewrote 3 to match scope</i>	<i>Google Doc link</i>	<i>8 user stories kept</i>	<i>4</i>
<i>Adjusted PK/FK, added missing entities</i>	<i>draw.io link</i>	<i>6 entities, 12 relationships</i>	<i>5</i>

Risks / Limitations Observed
<i>Some stories irrelevant</i>
<i>Missing business rules</i>

No.	SDLC Phase	Task / Activity	AI Tool Used	AI Output

Description & How to Fill
Sequential number of the log entry (1, 2, 3...).
Which phase of the project this AI usage belongs to (e.g., Requirement, Design, Implementation, Testing, Reporting).
Specific task you used AI for (e.g., User Story Development, ERD Design, Workflow 1 Coding, Test Case Generation).
Name of the AI tool (e.g., ChatGPT, GitHub Copilot, Copilot X, Bard, CodeWhisperer).
The actual output AI produced (summary only, e.g., "10 user stories generated", "ERD with 6 entities", "sample Spring Boot controller").
How you validated or modified the AI output (e.g., "kept 5 user stories, rewrote 3", "adjusted foreign keys", "fixed syntax errors", "refined test cases").
Link to a shared Google Drive folder containing screenshots/videos of the AI chat session(s). Naming convention: GroupX_SessionY_Activity (e.g., Group5_Session2_UserStory.png). Each screenshot/videos must clearly show: prompt, AI response, and student follow-up.
Numerical evidence of the contribution (e.g., number of user stories, number of entities, number of classes/methods, LOC, number of test cases).
Self-assessment of AI's usefulness (1 = not useful, 5 = very useful).
What limitations or risks you observed when using AI (e.g., "generated irrelevant user stories", "missing validation logic", "incomplete test coverage").
